S&P Global: US oil majors cast doubt on feasibility of net zero by 2050

September 30, 2026

Eric Smith, professor of practice and associate director of the Tulane Energy Institute, was interviewed by S&P Global about U.S. oil companies retreating from their goals of net-zero emissions by 2050.

> Absent regulatory pressures from the current administration, reducing emissions is still critical for US energy exporters, especially LNG companies that sell exclusively into foreign markets, said Eric Smith, a business professor at Tulane University and associate director of the Tulane Energy Institute.
